

Solution Architecture

Data / Storage Layer

Local CSV data processed via Pandas for training; model objects stored for runtime inference.

Date	06 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	5 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
<i>Presentation Layer</i>	<i>Provides the user interface for inputting socioeconomic data and displaying the forecasted HDI results.</i>	<i>HTML5, CSS3, JavaScript</i>
<i>API Gateway</i>	<i>Acts as the entry point for the application, routing user requests to the backend prediction logic.</i>	<i>Flask (Python)</i>
<i>Core Logic Service</i>	<i>Handles data pre-processing and executes the ML model to perform the HDI calculation.</i>	<i>Python, Scikit-learn, Joblib</i>
<i>Database/Storage</i>	<i>Stores the trained machine learning model files and processes incoming user data requests.</i>	<i>Pandas, Joblib (.pkl)</i>
